- Permanent

Graduate / Junior technical support engineer (Java apps, Linux, AWS, SQL) - North wales

Graduate / Junior technical support engineer sought by this market-leading software house developing complex logistics and supply chain software products and systems.

They are seeking an additional technical support engineer to resolve technical issues and assist in implementations of their key systems and software. You will have excellent communication skills and be involved in systems administration and using their call logging applications to update and resolve calls and fix issues.

Will suit a local graduate support engineer / analyst who is looking to train up on complex Java based systems with an interest in learning more about software and systems, with a general interest in programming, operating systems and testing. Any knowledge of programming languages such as Java or web technologies, Cloud based infrastructures (such as AWS) as well as Unix (especially Linux) or SQL would be useful, although training will be provided

This is a great opportunity to work with an innovative technology company who are growing and have an excellent local reputation. Would be an excellent opportunity for a recent graduate with a passion for technology

The company culture is very easy going and is commutable from many areas in North Wales; including Denbigh, St Asaph, Colwyn Bay, Ruthin, Deeside, Mold, Wrexham, etc. Happy to consider a relocater to the area too, with plenty of cheap, local accommodation.

Software Developer / software engineer

This company are looking for a developer to share their passion in programming with the development team.

Reporting to: Director of Development

Company: A young and innovative SEO software house and search marketing agency specialising in SEO, PPC & social media, working with a broad range of clients across a variety of market sectors.

Benefits: BUPA medical insurance and pension.

Education: 2:1 or above in a computer science degree or similar.

Role:

- Develop new features for their industry leading products.

- The products are cross platform, developed on Mac OS X, and written in Java. This may change over time as they develop new products and update the existing ones.
- An opportunity to work directly with like minded, passionate developers.
- Involvement in full development life cycle.
- Freedom to explore new technologies.
- Time reserved each week for self study to progress as a developer.

The right candidate will:

- Have 2-5 years experience of Java or C++.
- Have a passion for programming, demonstrable by evidence of personal programming projects, open source contributions etc.
- A commitment to on-going learning and improvement.
- Determination and patience to solve difficult problems.
- Have a 2:1 or above Computer Science Degree.
